

OVETTO RECYCLE BIN

Egg, the eco design solution for recycling bin

DESIGN FOR THE FUTURE

The industrial production of the Egg is designed to use recycled materials and to be assembled for distribution by fair trade cooperatives. The manufacturing process stems from a "mission" based on three fundamental objectives:

- **ECOLOGY:** use of recyclable materials and respect for the environment.
- **EDUCATION:** a project to educate people - starting in the home - to recycle waste.
- **SOLIDARITY:** the waste of modern and industrialized society provides employment opportunities for those living on the edge of society, able to restore their confidence and dignity allow them to return to the civil community.

AN Egg FULL OF BENEFITS

AESTHETICAL

- **Free from visual spoilage:** your living space is free from piles of paper/cardboard/plastic bottles/ wastes that need to be brought to the refuse room
- **Welcome Design Addition:** your bin becomes a beautiful design object that complements your interior design
- **Perfect visual match:** the large choice of colours and colours combinations allows you to chose the Egg that fit best to your existing interior

PRATICAL

- **More storage volume:** because 90l. (3 x 30l.) are better than 25l. or even 50l.; you have more volume to collect your domestic waste.
- **Maximized Storage Volume:** the in-built crusher helps to shrink plastic bottles and cans
- **Fewer duty walk** to the refuse room.
- **Maximize your corner space** with the spinning Egg; you can access the back tray by spinning the Egg on its vertical axe
- **Better hygiene:** each compartment can receive a bin liner for clean storage and easy waste removal
- **Healthier air quality:** your Egg is properly sealed and therefore prevents odours to creep out
- **Better floor access:** the Egg can be fixed to the corner wall and therefore allow an easy sweep of the floor underneath

ENVIRONMENTALLY FRIENDLY

- **Eco purchase:** the Egg is made of 40% to 70% of recycled material and is 100% recyclable.
- **Contribute to your daily eco-actions:** helps to reduce the volume of waste sent for disposal while making sure that waste is properly sorted and recycled.

OVETTO RECYCLE BIN

Egg Differenziato "The Concept"

RECYCLING

Sorting out waste plays an important role in the integrated waste management system as it allows, on one hand, the reduction of the overall volume of litter sent for disposal; and on the other hand, makes sure that refuse are correctly disposed of and recycled: waste must be kept separated according to the material class it belongs to.

The Interior Architect and Designer, has always been concerned with environment matters and he has designed an object that brings a solution for domestic waste sorting. Enter the "Egg differenziato" (Recycling Egg), an object of interior design that unites functionality, design, and environmental education.

FUNCTION

To promote domestic recycling, an object was needed that met the primary need of practicality.

The Egg is divided into three compartments, which are identified by three different colours that match those of the public recycling dumpsters (For example, paper and cardboard, organic waste, etc.).

Each compartment has a door for bag removal - which is also the same colour as the compartment - and a small opening with a cover for waste unload. Each cover closes tightly to prevent bad odours from escaping. On the top centre of the Egg, the in-built crusher for plastic bottles and aluminium cans reduces the volume of waste, allowing a larger number of bottles and cans to be collected.

DESIGN

The "Egg" shape of the container, its colours, as well as its soft and tapered line, makes it a design item that will fit into any room, with any furnishings. The Egg is an object that can be placed in a house or work environment, office, school, or outside on a terrace or in a garden.

OVETTO RECYCLE BIN

ENVIRONMENTAL EDUCATION

The Egg not only meets the primary need of function and beauty but it also serves a higher purpose: to offer a design and practical solution to people who wish to recycle properly and create opportunities for people to learn how to better respect the environment by helping them to correctly dispose waste.

Brought to masses, the Egg could help in changing people "habits" day after day, everywhere in the country. For this reason, the Egg could also be used in open spaces, in all public areas where it is necessary that appropriate behaviour continues: identify waste type prior to tossing it into the relevant container.

MATERIAL

The Egg is manufactured in recycled polypropylene; the polymer used comes from a minimum of 40% and up to 70% of recycled material.

DIMENSIONS

The Egg has the following footprint: diameter (d) 46 cm, height (h) 84 cm. A thirty-litre bag can be inserted into each compartment.

A DESIGN FOR THE FUTURE

The Egg industrial production is designed to use recycled materials and to be assembled for distribution by fair trade cooperatives. The manufacturing process stems from a "mission" based on three fundamental objectives:

ECOLOGY: Use of recyclable materials and respect for the environment.

EDUCATION: Starting from people's home, the project to educate and give a practical and beautiful solution for those who are already aware of the necessity to properly recycle waste.

SOLIDARITY: Our manufacturing process brings a formidable opportunity to turn the litter of modern and industrialized society into employment opportunities for those living on the edge of society, enabling them to restore their confidence, dignity to eventually ease their return to civil community.
